Cordon Murphy

Lab Portfolio: EMR, IAM, Business Analysis, QA

16 detailed labs that show how the work is actually done. Business problem, build, validation, finding, deliverables, in every lab.

9+ years testing and QA | Business analysis at CVS Health/Aetna and Flagstar Bank | CompTIA Security+

API testing with Postman and SoapUI | Section 508 at CVS Health, Flagstar Bank, Truist | Workday provisioning

EMR labs are training simulations. Entra ID and Okta labs are lab tenants only. No employer or client data anywhere in this pack.

QA

API Testing in Two Layers

Postman contract plus behavior testing. A green contract suite that was still wrong, and the method that catches it.

IAM

Deprovisioning in Workday

Joiner, mover, leaver, rehire lifecycle testing. Removal checked at hour one, rehire starting clean.

BA

Requirements That Can Be Tested

Eight vague requirements rewritten with acceptance criteria and traceability. The stranger test applied.

QA

Section 508 Past the Checker

Keyboard only testing at CVS Health, Flagstar Bank, and Truist. Four findings no checker could see.

Full lab documents, LinkedIn posts, Upwork entries, and Fiverr samples for each lab are in the lab portfolio pack.

EMR

Flag to Document Lifecycle

Flags, priorities, document statuses, and clearing the unsigned desktop in a training simulation.

EMR

User Setup and Privileges

Provider, nurse, and front desk setup with a 36 cell privilege matrix and a high severity finding.

EMR

KB Update Test Cycle

Monthly update run as a full test plan. The allergy list step that prevents a prescribing harm.

EMR

Go Live Sprint

Phased implementation for a 10 provider clinic: workflow, preload, readiness, week one tickets by SLA.

Full lab documents, LinkedIn posts, Upwork entries, and Fiverr samples for each lab are in the lab portfolio pack.

IAM

RBAC and SSO/MFA at a Bank

The cannot do column first. Lockout, recovery, step up, and disabled account error sameness.

IAM

Entra ID Lab Tenant

Users, groups, roles, MFA policy, and SSPR, with the break glass mistake documented and fixed.

IAM

Okta Lab Tenant

SSO app integration by group, MFA policy by risk, and a leaver run that ends access everywhere at once.

BA

Backlog Refinement

Twelve stories scored against a definition of ready. Four held out with named blockers, on purpose.

Full lab documents, LinkedIn posts, Upwork entries, and Fiverr samples for each lab are in the lab portfolio pack.

BA

Workflow Analysis

Current state mapped with time and owner, two future states, a recommendation with a fallback.

BA

UAT and the Go or No Go Call

Workflow based UAT scripts, triage by impact, and a written no go with exactly what would change it.

QA

Test Planning by Data States

Coverage defined by nine data states, not screen counts. Duplicate, reversal, and future dated first.

QA

Defects and Regression

Five reports held to a five minute reproduction standard, and regression selected by risk, not habit.

Full lab documents, LinkedIn posts, Upwork entries, and Fiverr samples for each lab are in the lab portfolio pack.

SKILLS AND HONESTY RECORD

Claimed, from real work

9+ years testing and QA. Business analysis at CVS Health/Aetna, about 80 percent BA and 20 percent QA there, and at Flagstar Bank. API testing with Postman and SoapUI. Section 508 accessibility testing at CVS Health, Flagstar Bank, and Truist. Workday account provisioning and deprovisioning. RBAC and SSO/MFA testing at Flagstar Bank. Medicare experience. CompTIA Security+. ALM Quality Center, Jira, Azure DevOps.

Training and labs, labeled as such

EMR analyst training, Athena/Centricity track: implementations, go live, flags, documents, user setup, KB updates, workflow analysis, revenue cycle. Entra ID and Okta built in free lab and developer tenants from October 2026 as part of a 4 month IAM lab plan toward Okta Professional and SC-300 study.

Not claimed anywhere

Production Epic or Cerner build experience. Entra ID, Active Directory, or Okta administration at an employer. FHIR or HL7. SAS. Smartsheet. Heavy automation. Heavy SQL. DHS Trusted Tester Certification.

How I work

Async and in writing. Test cases, defect reports, requirements, and plans a team can use without me in the room. Every finding carries its evidence, and every estimate carries its assumptions.
